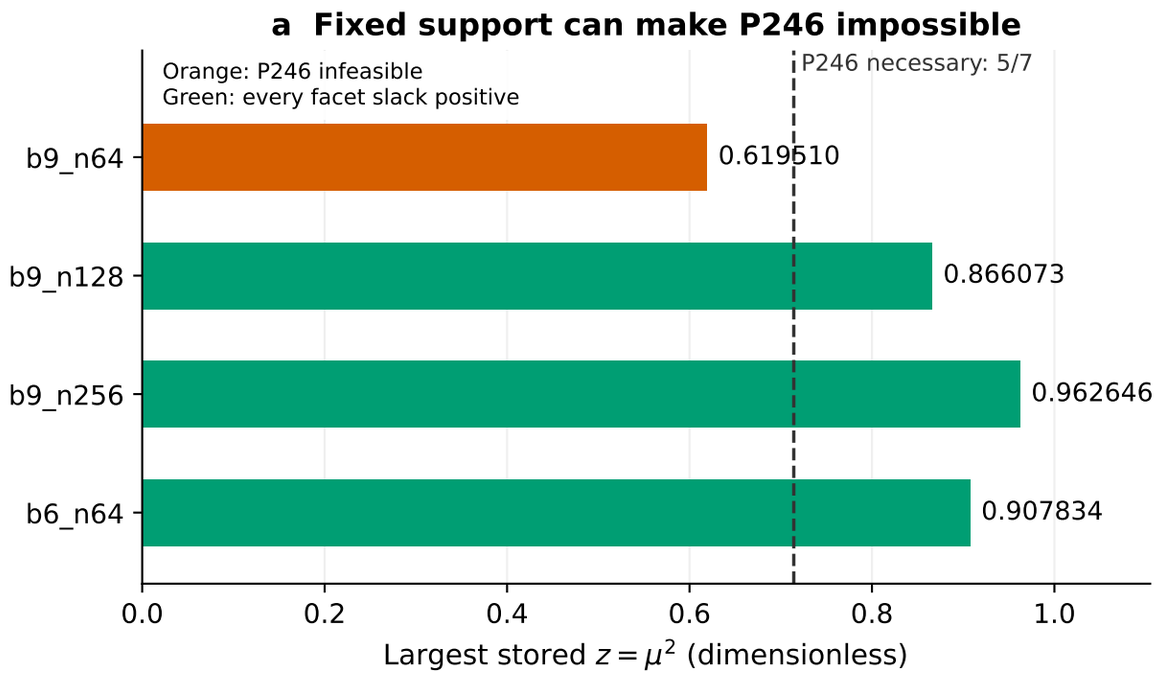
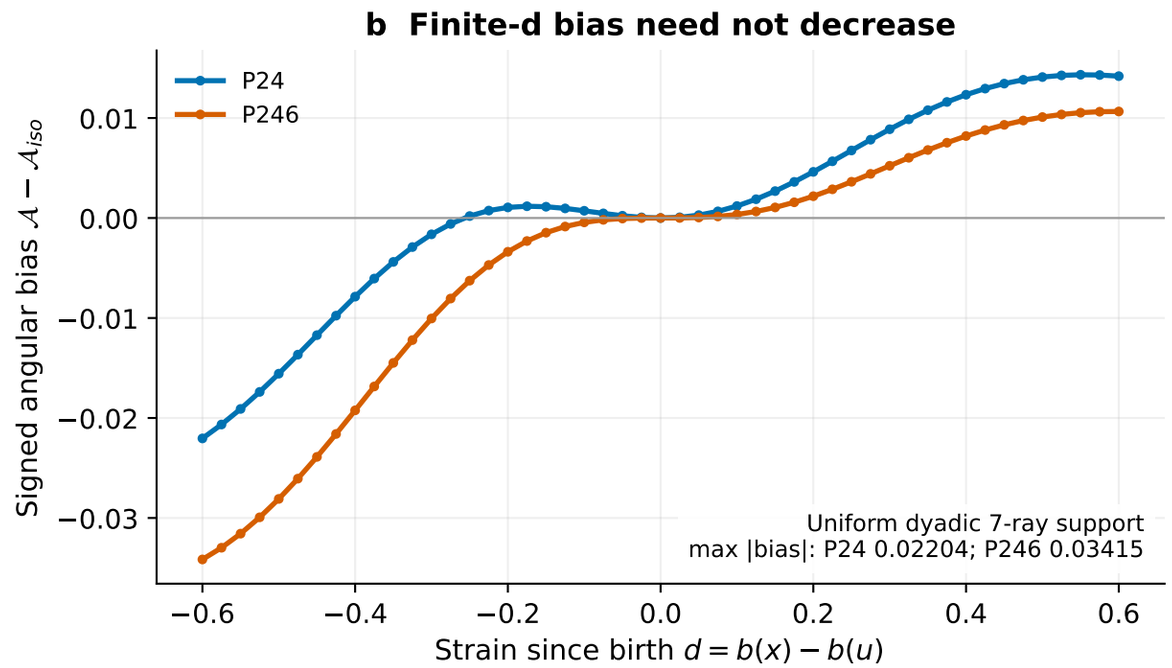
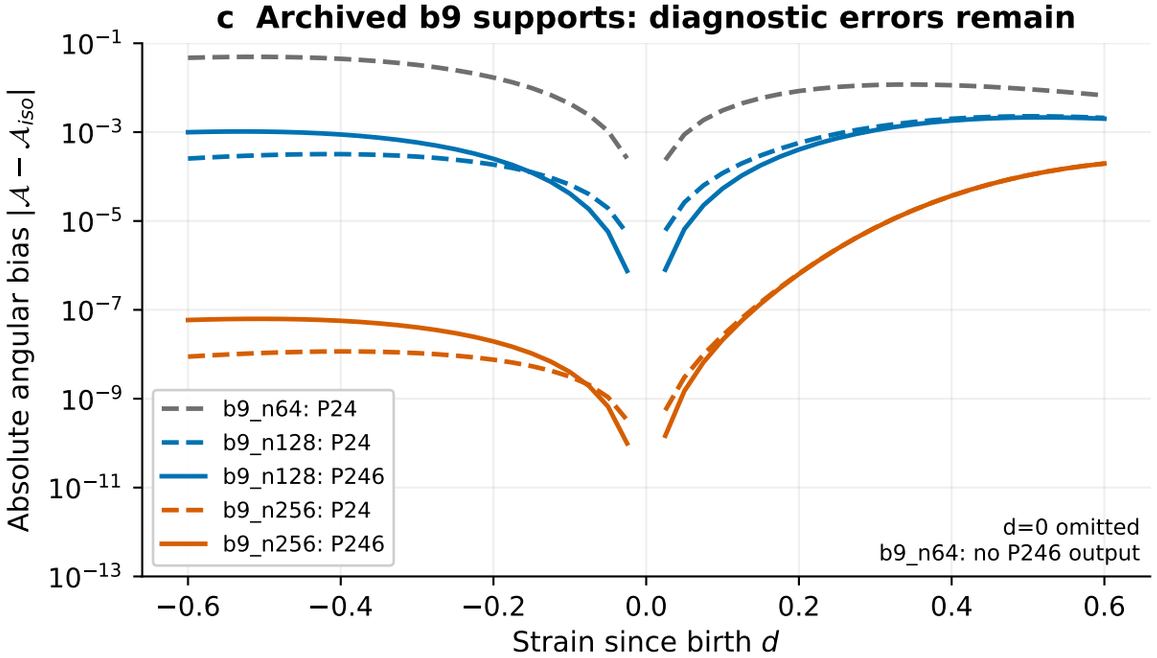
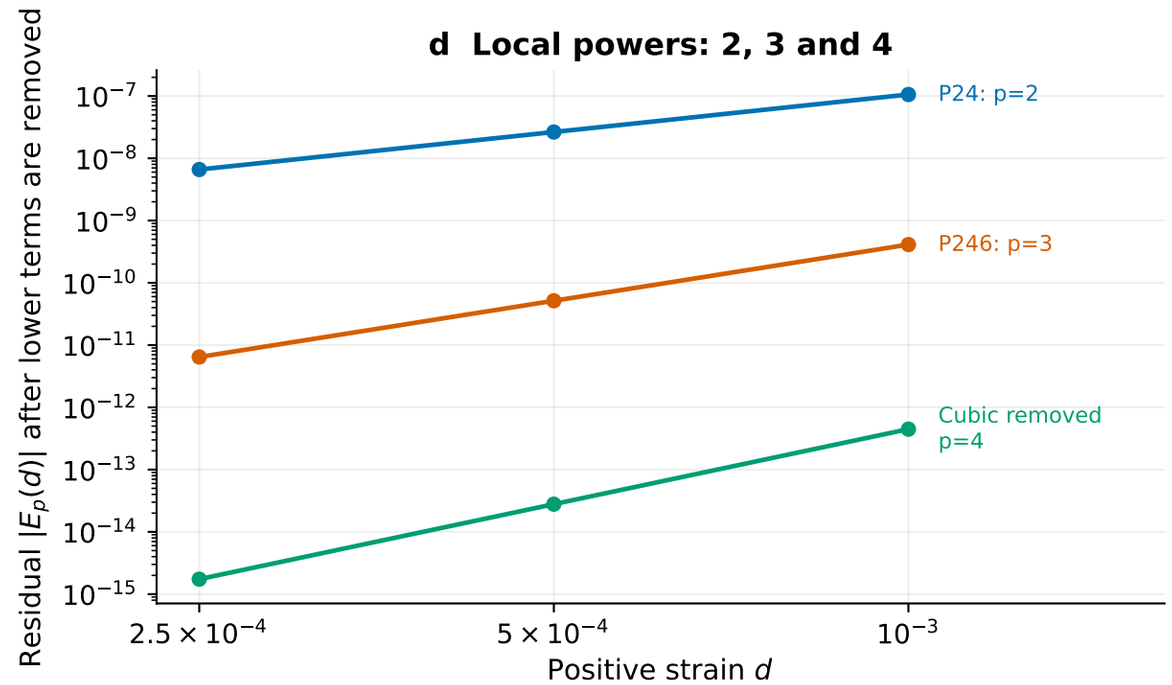
S11: positive birth weights and finite-strain angular response

Frozen source 7fb9b83cba01 | New isolated birth candidates | P24 / P246 exact gate: 3×10^{-15}









Stored results only; no solver is run by this figure script. Panel d uses E_p(d) = bias minus all actual rounded-output Taylor terms below order p.

Scope: factorized collisionless angular response. These checks do not certify evolving reactive full finite-bin spectral history or native Einstein/shear coupling.
