Frozen thick LINE01 exchange — synthetic frozen parameters, actual source and BASS receiver
Prescribed incoming boundary: f = 0.1
Actual finite transaction: f = 0, initial vacuum
Gross down
Gross up
Stable net
LTE down = up
LTE net = 0
Integrated count / N (dimensionless)
Frozen source time ω = η Δt (dimensionless)
Finite upper population n_u/N
Created photons D_{net}/N
Initial donor / N = 0.3
Finite population or photon count / N
Frozen source time ω = η Δt (dimensionless)
