All 21 isotope / ion states through reionization

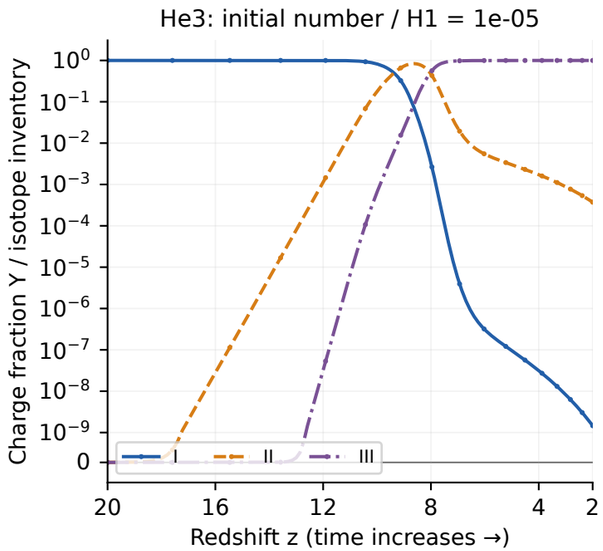

Lines: zero-shear, zero-seed control s00_m02_r02. Shading: samplewise min–max across 127 cases (scenario range).

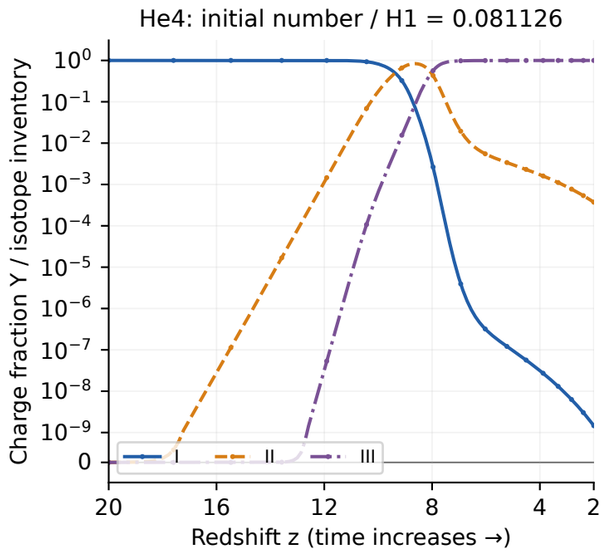

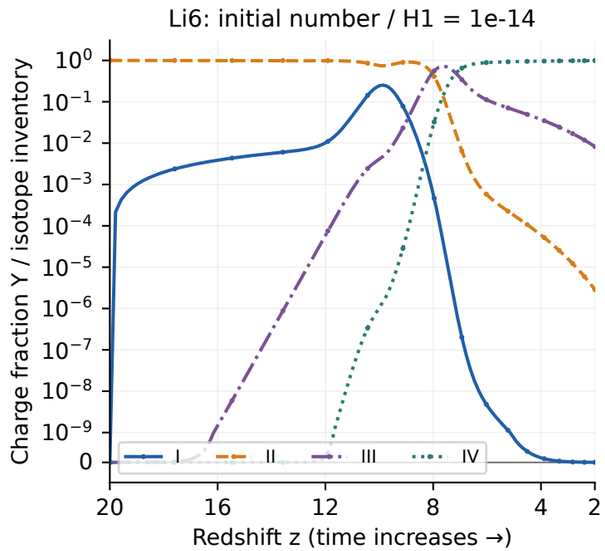

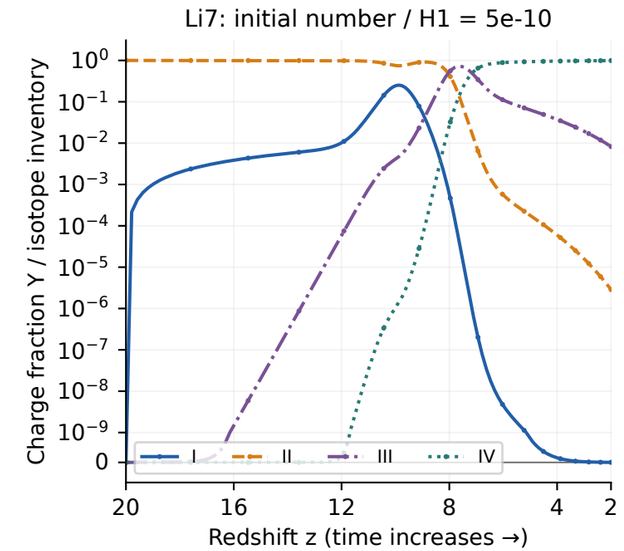

Retained LRS H–Li model; prescribed T(z) and external isotropic UV; test-fluid baryons.
Shared electronic rates impose equal H1/D, He3/He4 and Li6/Li7 fractions. Symlog $|f| \le 10^{-9}$ is linear; raw signs retained.
