Independent initial stress sweep at five shear seeds: discrete endpoints at z = 2
Top: signed shear difference from the same-ΣF, Pm,F = Pr,F = 0 control. Bottom: signed total stress.

Signed Ptotal,F(z=2)
Retained LRS H–Li model; prescribed T(z) and external isotropic UV; test-fluid baryons.
125 actual grid cases; squares are discrete samples. Shared diverging symlog color scale within each row; no interpolated contours.
