Independent matter/radiation stress: shear response and cancellation
Half-contraction; warm $a = 0.1999 \to 0.2$, $z = 4.00250125 \to 4$

729/729 completed cases; 64 steps; L=8; native 8×8; independent positive P_2 matter/radiation seeds.
Matter stress: massive Vlasov only; isotropic gas/dust contribute zero. Radiation: gamma + massless nu + evolving UV.
Gas initially 12,000 K, xHII=0.4, xHeII=0.5; massive fraction=0.1, m/T=30; all stress switches, compression and feedback on.
Finite conditional response; full EoR, donor/escape Q^a closure and angular/spectral convergence remain open.
Shear response = endpoint minus same-initial-shear, zero-initial-stress control. No fit or interpolation.
